Preface **xiii**

I Data, Introduction, and Motivation **1**

1 Introduction and Motivation **3**
1.1 What Are Extreme Values? . . . 3
1.2 Why Are Extreme Value Models Important? . . . 4
1.3 Examples of Applications . . . 5
1.3.1 Ocean Engineering . . . 5
1.3.2 Structural Engineering . . . 5
1.3.3 Hydraulics Engineering . . . 6
1.3.4 Meteorology . . . 7
1.3.5 Material Strength . . . 7
1.3.6 Fatigue Strength . . . 7
1.3.7 Electrical Strength of Materials . . . 8
1.3.8 Highway Traffic . . . 8
1.3.9 Corrosion Resistance . . . 8
1.3.10 Pollution Studies . . . 9
1.4 Univariate Data Sets . . . 9
1.4.1 Wind Data . . . 9
1.4.2 Flood Data . . . 9
1.4.3 Wave Data . . . 10
1.4.4 Oldest Age at Death in Sweden Data . . . 10
1.4.5 Houmb's Data . . . 10
1.4.6 Telephone Calls Data . . . 11
1.4.7 Epicenter Data . . . 12
1.4.8 Chain Strength Data . . . 12
1.4.9 Electrical Insulation Data . . . 12
1.4.10 Fatigue Data . . . 13
1.4.11 Precipitation Data . . . 13
1.4.12 Bilbao Wave Heights Data . . . 13
1.5 Multivariate Data Sets . . . 15
1.5.1 Ocmulgee River Data . . . 15
1.5.2 The Yearly Maximum Wind Data . . . 15
1.5.3 The Maximum Car Speed Data . . . 15

II Probabilistic Models Useful for Extremes 19

2 Discrete Probabilistic Models 21
2.1 Univariate Discrete Random Variables . . . 22
2.1.1 Probability Mass Function . . . 22
2.1.2 Cumulative Distribution Function . . . 23
2.1.3 Moments . . . 24
2.2 Common Univariate Discrete Models . . . 26
2.2.1 Discrete Uniform Distribution . . . 26
2.2.2 Bernoulli Distribution . . . 26
2.2.3 Binomial Distribution . . . 28
2.2.4 Geometric or Pascal Distribution . . . 31
2.2.5 Negative Binomial Distribution . . . 33
2.2.6 Hypergeometric Distribution . . . 35
2.2.7 Poisson Distribution . . . 36
2.2.8 Nonzero Poisson Distribution . . . 39
Exercises . . . 40

3 Continuous Probabilistic Models 43
3.1 Univariate Continuous Random Variables . . . 43
3.1.1 Probability Density Function . . . 43
3.1.2 Cumulative Distribution Function . . . 44
3.1.3 Moments . . . 45
3.2 Common Univariate Continuous Models . . . 46
3.2.1 Continuous Uniform Distribution . . . 46
3.2.2 Exponential Distribution . . . 47
3.2.3 Gamma Distribution . . . 49
3.2.4 Log-Gamma Distribution . . . 53
3.2.5 Beta Distribution . . . 54
3.2.6 Normal or Gaussian Distribution . . . 55
3.2.7 Log-Normal Distribution . . . 59
3.2.8 Logistic Distribution . . . 59
3.2.9 Chi-Square and Chi Distributions . . . 60
3.2.10 Rayleigh Distribution . . . 61
3.2.11 Student's t Distribution . . . 61
3.2.12 F Distribution . . . 61
3.2.13 Weibull Distribution . . . 62
3.2.14 Gumbel Distribution . . . 63
3.2.15 Fréchet Distribution . . . 63
3.2.16 Generalized Extreme Value Distributions . . . 64
3.2.17 Generalized Pareto Distributions . . . 65
3.3 Truncated Distributions . . . 66
3.4 Some Other Important Functions . . . 72
3.4.1 Survival and Hazard Functions . . . 72
3.4.2 Moment Generating Function . . . 74
3.4.3 Characteristic Function . . . 76
Exercises . . . 81

4 Multivariate Probabilistic Models 85
4.1 Multivariate Discrete Random Variables . . . 85
4.1.1 Joint Probability Mass Function . . . 85
4.1.2 Marginal Probability Mass Function . . . 86
4.1.3 Conditional Probability Mass Function . . . 86
4.1.4 Covariance and Correlation . . . 87
4.2 Common Multivariate Discrete Models . . . 90
4.2.1 Multinomial Distribution . . . 91
4.2.2 Multivariate Hypergeometric Distribution . . . 92
4.3 Multivariate Continuous Random Variables . . . 92
4.3.1 Joint Probability Density Function . . . 93
4.3.2 Joint Cumulative Distribution Function . . . 93
4.3.3 Marginal Probability Density Functions . . . 94
4.3.4 Conditional Probability Density Functions . . . 94
4.3.5 Covariance and Correlation . . . 95
4.3.6 The Autocorrelation Function . . . 96
4.3.7 Bivariate Survival and Hazard Functions . . . 96
4.3.8 Bivariate CDF and Survival Function . . . 98
4.3.9 Joint Characteristic Function . . . 98
4.4 Common Multivariate Continuous Models . . . 98
4.4.1 Bivariate Logistic Distribution . . . 98
4.4.2 Multinormal Distribution . . . 99
4.4.3 Marshall-Olkin Distribution . . . 99
4.4.4 Freund's Bivariate Exponential Distribution . . . 100
Exercises . . . 101

III Model Estimation, Selection, and Validation 105

5 Model Estimation 107
5.1 The Maximum Likelihood Method . . . 108
5.1.1 Point Estimation . . . 108
5.1.2 Some Properties of the MLE . . . 110
5.1.3 The Delta Method . . . 112
5.1.4 Interval Estimation . . . 113
5.1.5 The Deviance Function . . . 114
5.2 The Method of Moments . . . 117
5.3 The Probability-Weighted Moments Method . . . 117
5.4 The Elemental Percentile Method . . . 119
5.4.1 Initial Estimates . . . 120
5.4.2 Confidence Intervals . . . 121
5.5 The Quantile Least Squares Method . . . 122
5.6 The Truncation Method . . . 123
5.7 Estimation for Multivariate Models . . . 123
5.7.1 The Maximum Likelihood Method . . . 123
5.7.2 The Weighted Least Squares CDF Method . . . 125

5.7.3 The Elemental Percentile Method . . . 125
5.7.4 A Method Based on Least Squares . . . 126
Exercises . . . 129

6 Model Selection and Validation 133
6.1 Probability Paper Plots . . . 134
6.1.1 Normal Probability Paper Plot . . . 137
6.1.2 Log-Normal Probability Paper Plot . . . 138
6.1.3 Gumbel Probability Paper Plot . . . 141
6.1.4 Weibull Probability Paper Plot . . . 142
6.2 Selecting Models by Hypothesis Testing . . . 146
6.3 Model Validation . . . 148
6.3.1 The Q-Q Plots . . . 148
6.3.2 The P-P Plots . . . 148
Exercises . . . 149

IV Exact Models for Order Statistics and Extremes 151

7 Order Statistics 153
7.1 Order Statistics and Extremes . . . 153
7.2 Order Statistics of Independent Observations . . . 153
7.2.1 Distributions of Extremes . . . 154
7.2.2 Distribution of a Subset of Order Statistics . . . 157
7.2.3 Distribution of a Single Order Statistic . . . 158
7.2.4 Distributions of Other Special Cases . . . 162
7.3 Order Statistics in a Sample of Random Size . . . 164
7.4 Design Values Based on Exceedances . . . 166
7.5 Return Periods . . . 168
7.6 Order Statistics of Dependent Observations . . . 170
7.6.1 The Inclusion-Exclusion Formula . . . 170
7.6.2 Distribution of a Single Order Statistic . . . 171
Exercises . . . 173

8 Point Processes and Exact Models 177
8.1 Point Processes . . . 177
8.2 The Poisson-Flaws Model . . . 181
8.3 Mixture Models . . . 183
8.4 Competing Risk Models . . . 184
8.5 Competing Risk Flaws Models . . . 185
8.6 Poissonian Storm Model . . . 186
Exercises . . . 188

V Asymptotic Models for Extremes 191

9 Limit Distributions of Order Statistics 193
9.1 The Case of Independent Observations . . . 193
9.1.1 Limit Distributions of Maxima and Minima . . . 194
9.1.2 Weibull, Gumbel, and Fréchet as GEVDs . . . 198
9.1.3 Stability of Limit Distributions . . . 200
9.1.4 Determining the Domain of Attraction of a CDF . . . 203
9.1.5 Asymptotic Distributions of Order Statistics . . . 208
9.2 Estimation for the Maximal GEVD . . . 211
9.2.1 The Maximum Likelihood Method . . . 212
9.2.2 The Probability Weighted Moments Method . . . 218
9.2.3 The Elemental Percentile Method . . . 220
9.2.4 The Quantile Least Squares Method . . . 224
9.2.5 The Truncation Method . . . 225
9.3 Estimation for the Minimal GEVD . . . 226
9.4 Graphical Methods for Model Selection . . . 226
9.4.1 Probability Paper Plots for Extremes . . . 228
9.4.2 Selecting a Domain of Attraction from Data . . . 234
9.5 Model Validation . . . 236
9.6 Hypothesis Tests for Domains of Attraction . . . 236
9.6.1 Methods Based on Likelihood . . . 243
9.6.2 The Curvature Method . . . 245
9.7 The Case of Dependent Observations . . . 248
9.7.1 Stationary Sequences . . . 249
9.7.2 Exchangeable Variables . . . 252
9.7.3 Markov Sequences of Order p . . . 254
9.7.4 The m-Dependent Sequences . . . 254
9.7.5 Moving Average Models . . . 255
9.7.6 Normal Sequences . . . 256
Exercises . . . 258

10 Limit Distributions of Exceedances and Shortfalls 261
10.1 Exceedances as a Poisson Process . . . 262
10.2 Shortfalls as a Poisson Process . . . 262
10.3 The Maximal GPD . . . 263
10.4 Approximations Based on the Maximal GPD . . . 265
10.5 The Minimal GPD . . . 266
10.6 Approximations Based on the Minimal GPD . . . 267
10.7 Obtaining the Minimal from the Maximal GPD . . . 267
10.8 Estimation for the GPD Families . . . 268
10.8.1 The Maximum Likelihood Method . . . 268
10.8.2 The Method of Moments . . . 271
10.8.3 The Probability Weighted Moments Method . . . 271
10.8.4 The Elemental Percentile Method . . . 272
10.8.5 The Quantile Least Squares Method . . . 276

10.9 Model Validation 277
10.10 Hypothesis Tests for the Domain of Attraction 281
Exercises 285

11 Multivariate Extremes **287**
11.1 Statement of the Problem 288
11.2 Dependence Functions 289
11.3 Limit Distribution of a Given CDF 291
11.3.1 Limit Distributions Based on Marginals 291
11.3.2 Limit Distributions Based on Dependence Functions . . . 295
11.4 Characterization of Extreme Distributions 298
11.4.1 Identifying Extreme Value Distributions 299
11.4.2 Functional Equations Approach 299
11.4.3 A Point Process Approach 300
11.5 Some Parametric Bivariate Models 304
11.6 Transformation to Fréchet Marginals 305
11.7 Peaks Over Threshold Multivariate Model 306
11.8 Inference 307
11.8.1 The Sequential Method 307
11.8.2 The Single Step Method 308
11.8.3 The Generalized Method 309
11.9 Some Multivariate Examples 309
11.9.1 The Yearly Maximum Wind Data 309
11.9.2 The Ocmulgee River Flood Data 312
11.9.3 The Maximum Car Speed Data 316
Exercises 318
